Introductory note

This introductory note does not form a part of the permit

The main features of the installation are as follows. This is a permit to operate a hazardous waste transfer station at Carlyon Road Industrial Estate in Atherstone, Warwickshire. The Operator of this installation is Recycling and Resource Management Ltd. The Installation is a waste storage facility for off site disposal of hazardous wastes. The non-hazardous wastes will remain regulated under the current waste management licence (WML/453). Wastes are mainly derived from laboratory smalls sector. However, a small amount of wastes arise from industrial processes. The listed activities within the installation are blending and mixing (D 13), repackaging (D 14) and storage (D15) of hazardous wastes. A maximum annual throughput of hazardous waste is 2 500 tonnes with a maximum capacity of 358 tonnes of wastes at any one time. The site consists of an open yard with hardstanding, which is used for loading and unloading, and an enclosed building for waste storage and handling activities.

There are no point source emissions to air from the installation. There is a potential for fugitive emissions to air particularly from the bulking up activities but also from the sampling, loading and unloading, spillages and general storage. Although most of the activities are conducted within the building, fugitive emissions can escape to air through vents. Bulking up activities are undertaken within a fume cupboard. This is an enclosed method using activated carbon filtration and there is no extraction point from the abatement. There are no point source emissions to surface water or sewer from the installation. Surface water captured from the yard is emitted via the public surface water drainage system that leads into the River Anker. The River Anker runs approximately 700 m away from the installation. The only emissions to sewer from the installation are domestic.

The geology underneath the site is Mercia Mudstone, which is classified as a non-aquifer. This suggests an unlikely pathway from the installation to aquifer.

There are no Sites of Special Scientific Interest (SSSIs) or European designated sites in the proximity of the Installation.
